For Immediate Release

Central Virginia Electric Cooperative Voltage Conversion Project

[Lovingston, VA] – Central Virginia Electric Cooperative (CVEC) has been working on a series of power system upgrades in the Cunningham area and along Route 619, Ruritan Lake Road, and Route 620, Rolling Road. This Voltage Conversion project will improve service reliability and increase the capacity of the electric system by converting the operating voltage from 12,500 to 25,00 volts.

Most of the preparation for this project has been done without the need to interrupt service to our members. However, to complete the Voltage Conversion, CVEC will need to temporarily interrupt service to provide a safe work environment for line personnel working on this project. CVEC had previously scheduled the outage for Wednesday, April 30, 2014. Due to inclement weather, the outage has been rescheduled for Thursday, May 1, 2014. CVEC sent a letter notifying all members who will be affected by this outage.

Central Virginia Electric Cooperative is a member-owned, not-for-profit, electric utility serving the rural portions of 14 Virginia counties.
